

# Ringies

Raccoons nd ringtails

---

## Raccoons

Raccoons are a medium sized mammal with a humped posture, black face mask and gray and black ringed tail. Their paws resemble human hands and feet with five toes, allowing great dexterity.

Raccoon litters average 4 cubs (or kits).

---

## More about raccoons

Raccoons live in a variety of habitats—agricultural, forest, wetlands and city neighborhoods. They are omnivores eating insects, crayfish, crabs, mussels, turtles, birds and muskrat young, as well as nuts, seeds and berries. They are crepuscular and nocturnal, for the most part, but can be active during the day. They communicate with screams, hisses, growls, snarls, chatters, whimpers and purrs.

## Ringtail cats

Ringtails are small mammals with black and white ringed tail, black ringed eyes in buffy patches, cat-like body and foxlike face with large oval ears. They have 40 teeth and semi-retractable paws. Litters range from 1 to 4. They are solitary, except during the mating season; mothers care for the young.

# More about ringtails

Ringtails prefer rocky outcroppings in a variety of habitats ranging from semi-arid, chaparral, to forests. Ringtails are active mainly at night and dusk. They are good climbers and can maneuver by ricocheting. They are omnivores eating rodents, rabbits, squirrels, insects and plant matter. . They make a variety of vocalizations including barks and chirps.

One way to tell ringtails from raccoons is that raccoons have a black mask and ringtails have white spectacles around the eyes.
