City of Rosenberg,Texas

Self-Guided Nature Tour & Park Map

1 Butterfly Garden: This educational garden serves as a vibrant habitat for a variety of local butterfly species. It features both nectar and host plants for species such as monarchs, gulf fritillaries, swallowtails among others. Visitors have the chance to deepen their understanding of these fascinating creatures and discover which plants can help sustain them. Pergolas and picnic tables are available for people to sit, picnic, and enjoy the butterflies.

2 Seabourne Lake: This 5 acre stocked lake serves as a thriving habitat for fish, ducks, and a variety of water plants, making it an ideal spot for nature enthusiasts and aspiring anglers to explore and learn.

3 Arboretum: Many of the trees displayed in the Arboretum, near the Lake, and in the Woodlands have identification labels to help visitors recognize the species. Most of these trees are native to the region. Additionally, you'll find other labeled trees scattered throughout the park and along the trails.

4 Native Plant Garden: This educational garden has two main goals. First, it aims to showcase native prairie plants. Second, it offers insights into creating habitat gardens that attract bees, butterflies, prairie birds, and hummingbirds. Explore the various signs and pamphlets available throughout the garden for more information. A large pergola and picnic tables are available to sit, picnic, and enjoy the garden.

5 Prairie Restoration Area: Preserving and restoring prairie land is vital for the survival of many local species of plants, insects, and animals. This 20-acre area is being carefully managed to return it to a more natural state. We invite you to explore the Pollinator Pocket Prairie, which is teeming with native plants that attract and nourish essential pollinators like bees and butterflies.

6 Wetlands Pond: This shallow pond draws in thousands of birds each year, featuring permanent residents and various migratory species. With a maximum depth of just 36 inches, it serves as an ideal habitat for a diverse range of plants and wildlife, including turtles, fish, and the occasional alligator.

7 Woodlands and Bird Sanctuary: The wooded areas of the park offer a serene habitat for various bird species. Enjoy a peaceful walk along the winding trails, where you can discover the Bird Sanctuary and Bird Blind designed to invite even more avian visitors. Over 200 different bird species have been spotted within the park, making it a paradise for birdwatchers and nature enthusiasts alike. Many birds call Seabourne Creek Nature Park home throughout the year, while a larger number pass through during their migrations in spring and fall. This beautiful park is a key stop on the Great Texas Coastal Birding Trail.
