## Nature, Look Into It

- Rehanon Pampell

As most of you know already, Nature Fest is just around the corner. Whether you're an outdoor enthusiast or one who enjoys nature at a distance, the Central Texas Nature Fest has something for everyone. Nature Fest is a fun, educational event for the whole family, focusing on the rich diversity of wildlife, habitat, history and heritage of Central Texas--AND there will be food trucks and vendors too! Nature Fest is on October 10th, 11 am – 5 pm at Bend of the River Park in Temple. TELL YOUR FRIENDS AND FAMILY!! Located directly off

**Earth Day,  
Every Day**

# From the President's Pen

## Bob White

I heard a quail today and it put a song in my heart.

I heard a quail today and it gave me quite a start.

We were working some calves for the spring, going thru the paces.

When we heard the call we all froze in our places.

At first my subconscious said it was a mockingbird doing a mimic,

But then I thought, no, he's never heard the sound so the call must be authentic.

As I strained to hear it again, I heard not only one, but two, then three!

One call by the pond and two calls back near a giant oak tree.

So maybe there is hope for the quail and not all are in decline

I know of at least three that I hope will be fine.

# It's Raining, It's Pouring...

The lakes are up after all the record breaking rain we got in May. Bell County Master Gardener, Melinda Arriola took these BEFORE AND AFTER photos of Stillhouse Hollow Lake at Dana Peak Park. The top photo is from May 2014 and the photo to the right is May 2015. The dock is afloat again! She collected 11.6 inches in May of this year!

The following site has a map with rainfall totals in the area: [http://www.srh.noaa.gov/ridge2/RFC\\_Precip/](http://www.srh.noaa.gov/ridge2/RFC_Precip/)

Photos by BCMG Melinda Arriola

# Burleson Native Prairie Walk

## - Lynn Fleming

Dicksissel. Dicksissel. Over and over again, that is the call that you hear on the prairie. The sparrow like bird was named for his call and that is just what he says....dick sissel. The little bird with the big voice is prominent on the prairie. They love to hang around on last year's growth of Maximillian sunflowers, goldenrod or other stalks strong enough to hold his weight while he sings his song.

There were plenty of dicksissels on the prairie when our Master Naturalist Chapter along with many other individuals from various organizations visited the Burleson Prairie on May 7<sup>th</sup>. This was the second visit to the prairie by our chapter for a

Top: The group attending the walk; top right: Bob and Mickey Burleson restored their prairie over several decades, likely the first prairie restorationists in Texas. Taken in 2009; right: Nanette Whitten pointing out the identifying characteristics of Standing Cypress, *Ipomopsis rubra* ; above: Sensitive Briar, *Schrankia* sp.

spring walk among the replication of the tall grass prairies that once ruled the landscape in the blackland prairie region.

On this visit, Mickey Burleson was away on a trip to Big Bend with friends. Many others were in attendance though, who had knowledge of the prairie to share with others. Armed with field guides, cameras, and plenty of bug spray, we split up into groups and

Continued on next page...

# Burleson Walk...continued

headed out to explore the prairie plants and generally enjoyed being outside in nature.

Bob and Mickey Burleson have spent a lifetime of love in their quest to replicate a tall grass blackland prairie. They collected seeds from remnant prairie sights (many of which are long gone now), from railroad right of ways and other obscure places that still entertained ancestors of the original inhabitant species. When they began their journey, there was no written guide or instruction on how best to accomplish their mission.

Much of what they did was by trial and error in the beginning and then fine-tuned over time. Much of the equipment used was not made for the purpose that Bob needed it for so he modified and created implements that accomplished the job at hand. Over the years, three different combines were used to slowly pass through the prairie at seeding time to harvest the bounty. Not an easy job since so many plants seed at different times of the year. Flowers seed in late spring, late flowers in summer and fall and many of the grasses in summer and fall. Harvesting could take several passes with equipment depending on the target species.

The Burlesons maintained the prairie by planting more seed every year. Some of the seed were new additions to the mix from a find on a trip, others were from species already in place, but taken from another site to add diversity to the prairie. Bob loved the deeper colored American Basket Flowers and sought out the ones with the deepest purple color for seed.

love in their quest to replicate a tall grass blackland prairie. They collected seeds from remnant prairie sights (many of which are long gone now), from railroad right of ways and other obscure places that still entertained ancestors of the original inhabitant species. When they began their journey, there was no written guide or in-

struction on how best to accomplish their mission. Fire has also helped the prairie. The woody species, green briar, and other non-desirable plants can be controlled with fire. Timing of the fires is either in the early spring or fall depending on what is trying to be reduced. Two years ago, Mickey was very concerned with an invasion of King Ranch Bluestem. With the help of several experts and willing volunteers, she set up a prescribed burn in October to address the invasion. It was a hot fire with many circling hawks waiting for escaping rats, mice and rabbits. After the smoke cleared and the embers died, the waiting began to see how effective the burn had been.

Our visit last spring was the first season after the burn. Things were looking great, plants were coming out, grass reviving and of course the dicksissels were there. 2014 could not have been a better year for the prairie to recover! We had rains that soaked the ground and spurred on the prairie growth all year. And low and behold, most of the King Ranch blue-stem had been controlled. Success of the fire.

This spring on our tour, we saw the prairie looking as good as I have ever seen it. So many blooms and promises of seeds to come. I wish our group could visit each week during the spring because the prairie plants in bloom are different on every visit. The multitude of species so lovingly planted by Bob and Mickey are having a hay day.

Hopefully, this year we can schedule a fall prairie walk and see another side of the prairie as it prepares

Above: Lynn points out a stand of Rattlesnake Master; Left: Katherine Bedrich finds some Rabbit Tobacco.

for the winter respite. The grasses and fall bloomers are beautiful to see. And yes, the dicksissels will be there too. Singing their hearts out.

Photos by Zoe Rascoe

## Nature, Look Into It...continued

I-35, they won't be able to miss us. Entrance into Nature Fest will be \$5 per vehicle, but the amount of fun to be found will be priceless.

For those that missed last year's preparation, it took us weeks to come up with the tagline. With a list that included great taglines like 'Walk on the Wild Side' or 'Nature, It's Out There' or 'Outside, No Box Required' or 'Dare to Explore' - it would be hard for anybody to pick just one. But 'Nature, Look Into It' won. We hope each visitor will be able to "Look Into It," meaning nature, with a new understanding and appreciation though education, recreation, and exploration. This will in turn inspire attendees to help with the conservation of Central Texas' diverse wildlife and habitat for future generations to explore. And simply put, encourage people to look into their own backyards. We also hope to help people plan their next outdoor adventure or wildlife management venture.

We are expecting 1000 adults and children from all over Central Texas! Some of our exhibitors from last year included Texas Parks and Wildlife, US Fish and Wildlife, Native Plant Society, Texas Stream Team, Waco Wetlands, Lady Bird Wildflower Center, Horned Lizard Society and Mayborn Planetarium.

So far for Nature Fest 2015, we have the following exhibitors: Bird Watching 101 with the Audubon Society; Bird Nests with the American Bird Observatory; Butterflies with Anne Hamilton; Bluebirds with the Bluebird Society; How to Build a Fire with Boy Scouts; Live Snakes (and other herps) from Franklin HERPS; and the Honey Queens. I'm sure by the time this article is published, we will have many more exhibitors! Your element chairs are working hard to bring fasci-

nating exhibitors. If you have an idea for an exhibit, please let us know!

Join us the night before Nature Fest (Friday, October 9<sup>th</sup>, 7:30-8:00pm) for a night hike to ex-

Night hikes are a chance for us to explore our senses, search for nocturnal movements in the forest and learn about the sounds in the night. The hikes are geared to children ages 6 to 12 and their families.

plore our senses, search for nocturnal movements in the forest, and learn about the sounds in the night. Then join the Central Texas Astronomical Society for a star gazing party (8:00-10:00pm). Dress appropriately and bring folding chairs and red flashlights. (Red flashlights can

Continued on next page...

## ***Nature, Look Into It...continued***

be made by putting red plastic over the lens of an ordinary flashlight.)

The hike is geared to children ages 6-12 and their families, but all are welcome to both activities! Friday night's activities are FREE!!!

We have **lots** of volunteer opportunities for Nature Fest like setting out signs, guiding exhibitors/vendors to their designated spots, and manning tables like the CTMN welcome table, CTMN Gift Shop, and Passports Table. We will work with you to find the perfect slot for you to fill. Also, if you know people/organizations that would be interested in donating time or money, please have them contact Rehanon Pampell. We have a few wish list items this year that we didn't have at the first Nature Fest. Some of the items include: Petting Zoo, Rock Wall, Bounce Houses, and Face Painting. Be sure to check out our new Nature Fest website at [CentralTexasNatureFest.org](http://CentralTexasNatureFest.org) for the latest information.

In the meantime CTMN, get out there and look into nature!

# Why I am a Master Naturalist...

## I Finished the Course, Now What?

- Joe Dorn

### Becoming a Texas Master Naturalist takes a little time...

The TXMN requires a minimum education, forty hours of 'payback time' and eight additional hours of 'Advance Training' before becoming a fully qualified member. The question all new members have is 'how do I get that?'

It is not hard, Sarah and I have just passed our first year anniversary of completing the course and I have over 300 hours of volunteer time and Sarah has over 100 hours with a bunch of AT time for both of us. (I spend a lot of time editing photographs for the Flickr displays and writing articles for *The Tracker*, otherwise Sarah and I have participated in the same events.)

The real benefit of the program requirements is that first you establish a relationship with the members and mentors of your class and then you expand your friendship list as you participate in the various volunteer programs and work with other members. By virtue of the fact that "you paid your money and took your course" means that you already have something in common with the other members and then it just becomes a tagging process of putting faces, names and specific interests together.

Some of the activities are more physical in their requirements such as trail cleanups and brush removal. Miller Springs and Mother Neff workdays are an example. Take a look at:

<https://www.flickr.com/photos/ctmn-centraltexas/sets/72157645336613440>

Other events serve a purpose for tracking the flora and fauna of our area such as the 'Butterfly Walk'. There were

several teams spread out over our assigned territory and we recorded the critters that flutter. A report is sent to a national tracking organization.

<https://www.flickr.com/photos/ctmn-centraltexas/sets/72157645444271247>

We have the opportunity to participate in several public relations events with the schools and parks. A most enjoyable time was 'The Grand Re-opening of Mother Neff State Park' earlier this year.

<https://www.flickr.com/photos/ctmn-centraltexas/sets/72157650087527308>

Our big event last year was the 'First Annual Nature Fest'. I have a problem with the term 'First Annual' until the second edition occurs it ain't 'annual'. The 2015 Class will have the chance to participate in the 'Second Annual Nature Fest'. This is by far the most demanding event the CTMN has undertaken and it was a huge success. The event really made me appreciate the leadership of our group and I was very proud to have been a part of it. There are five albums about the event;

Continued on next page...

## I Finished the Course...continued

the first one is about set-up at:

<https://www.flickr.com/photos/ctmn-centraltexas/sets/72157648495799290>

The planning, setup, cleanup and presentations take a lot of time also. Things don't just happen. Last year's graduation is an example:

<https://www.flickr.com/photos/ctmn-centraltexas/sets/72157645794697883>

All organizations are in need of new members and name recognition. We do that by participating in

events such as the 'Home and Garden Show' and 'The Central Texas Master Gardener's State Convention'.

<https://www.flickr.com/photos/ctmn-centraltexas/sets/72157651785845792>

<https://www.flickr.com/photos/ctmn-centraltexas/sets/72157653240603215>

So what about the 'Advance Training' requirement? This makes falling off of a log look hard...

Sarah and I have been involved in various naturalists' type groups for the last fifty years but the past year has given us more opportunities to attend training sessions and seminars that have a direct bearing on our wildlife conservation efforts that the other 49 years combined.

Do not miss the *Clearwater Ground Water Conservation District* annual seminar complete with a pretty good meal. We have all become much more aware of the value of our water resources after the past few years and this was an eye-opener for me. Did you

know that Williamson County gets some of their water from Bell County?

Another very worthwhile 'AT' event was the *Texas Pollinator PowWow* at the Lady Bird Wildflower Center. I currently have some beautiful blooms on my bean plants but no beans are forming....Where are my bee's when I need them? And what happened to the Monarchs?

<https://www.flickr.com/photos/ctmn-centraltexas/sets/72157651794756601>

The CTMN meetings usually have a little 'AT' attached...

<https://www.flickr.com/photos/ctmn-centraltexas/sets/72157650390311178>

And occasionally we take a break from the work and learning and just get together. This was last year's Christmas meeting at Zoe Rascoe's home. Sarah and I felt as though we were with friends after the activities and training sessions of the preceding months...

<https://www.flickr.com/photos/ctmn-centraltexas/sets/72157647663882023>

Jump in, there is plenty of water in the pool...

And that's:

[Why I am a Master Naturalist...](#)

# Waco Wetlands News

- Richard McCarthy

Several Kindergarten Children from McGregor School enjoying a field trip to the Waco Wetlands.

The Class was divided into three groups; one group went on a nature walk around the Wetlands, one group watched a Video of "Bill Nye, The Science Guy", and the third group dip netted for Macro Invertebrates. They would spend nearly forty-five minutes at each activity and then rotate so all could participate in each of the activities.

These field trips are scheduled by the various schools to enhance their science programs. This spring twenty area schools have scheduled field trips to the Waco Wetlands. Central Texas Master Naturalist Chapter supports this activity.

# Stream Team Training

- Richard McCarthy

On Saturday, May 23rd, Stream Team Basic Training was attended by: Dan Flores; Jean Flores; Sarah Byrd; Anna Archambeault; Anita Hardin; Andreas Wooten; Peggiann Jones; Cindy Allen; Shawn Perry; Trudy Perry; Ben Kailing; Kaylynn Weldon; and Instructor, Travis Tidwell.

Students collecting and testing water samples from Nolan Creek. Students tested and recorded results from samples taken at the site and compared with the Instructors sample results.

Photos by Richard McCarthy

# Shore Bird I.D.

- Zoe Rascoe

Nicole Norelli offered tips on identifying shore birds that migrate through Central Texas at our April General Meeting. This included looking for characteristics in the bird's silhouette since they are often viewed along the shoreline at dawn or dusk.

Some shore bird species are so similar that they have to be next to the other species to tell them apart. Nicole also described banding techniques and the importance that bands play in migratory bird research.

Nicole has worked with the National Audubon Society, The American Bird Conservancy and is currently employed with Texas A&M AgriLife Research at Blackland in Temple. She has just completed training to graduate as a Central Texas Master Naturalist.

\*\*\*

It may be hard to believe, but there's a zero percent chance of rain this Tuesday, June 2nd!

Our Master Naturalist friends in Milam County are hosting an Advanced Training session on Tuesday evening from 6:00-8:00pm. The program is "Migratory Shore Bird Identification" by our own Nicole Norelli! If you missed her presentation at our April meeting or if you want to learn more (Tuesday's

session will have additional information in a longer session) take a road trip to Buckholts. It's about 20 minutes east of Temple right on Hwy 36. Nicole's presentation counts for two hours of Advanced Training.

With the recent rain and flooding, any of us could have shore birds hanging out in our yards!

Above: We had a company donate a big bag of work gloves. Thought they must have come from Ronald McDonald...

Nicole has worked with the National Audubon Society, The American Bird Conservancy and is currently employed with Texas A&M AgriLife Research at Blackland in Temple. She has just completed training to graduate as a Central Texas Master Naturalist.

# Why I am a Master Naturalist...

## A Weekend in the Hill Country

- Joe Dorn

### A Whole Lot of AT Going On...

When I was first researching the CTMN, I read through most of the newsletters (*The Tracker*) that were online. One issue in particular caught my attention and that was the one that had an item about the Texas Master Naturalist Convention. So what is it? Lynn Fleming described it as a weekend full of 'AT' (Advanced Training), others described it as a gathering of nature nuts being guided by a bunch of squirrels, but all concurred that it was fun. I was warned that the accommodations and courses fill up fast.

Sarah and I are always interested in presentations that enhance our knowledge of the natural world and this was a chance to get three days crammed full of them given by professional level instructors. The 2014 edition, October 24-26, was being held at the MO Ranch, a Presbyterian retreat, near Hunt, Texas, deep into the Hill Country. The very reasonable registration fee covered room, board and activities. I was ready to go.

### Trip in and Arrival...

I tend to forget how long Texas roads are. Hunt, Texas should just be down the road a piece, it is but it is a 'good piece' about 200 miles worth. We stopped by Copperas Cove to pick up Dana Hazelwood and three hours later we were approaching Hunt and the MO Ranch. The last miles were through some of the most attractive areas of Texas and my camera finger was getting itchy. The reception area was in keeping with the Hill Country theme. We were a little early, so we decided to drive around a bit. You can follow the photographs for the rest of the story by going to:

<https://www.flickr.com/photos/ctmn-centraltexas/sets/72157649940644086>

### They look a lot like us...

We entered the reception area and found it already filling with a lot of smiling faces that looked a whole lot like the 'Blue Shirts' I wrote about previously. The area was filled with items that excite students of nature. I visited with the lady in the company store and she was amazed at the number of items with dragonfly themes that she was selling. I suggested that she put in a rush order to China for a boatload more.

The registration was done very quickly. We were given the keys to a nearby room and a bracelet that was our food ticket for the next three days...

We had a couple of hours of free time before the first classes started. Free time was not available in quantity for the next three days. I anticipated a lot of photographic opportunities but for the most part I had to use the time moving between events to grab my shots.

### Classes and Events...

The different sessions started at 1:30; the classes were in the campus area of the Ranch, but some were guided trail walks or off-campus bus trips. The major problem was deciding what to do. If we had a full week, it still would not have been enough time. Sarah and I coordinated our selections so that we could cover most of the sessions that would assist in our wildlife activities.

The last class of the day ended about 5:00 and then it was on to a social gathering sponsored by the MO Ranch. It was obvious this was not a Baptist retreat...

Next out was the first meal although it wasn't really needed after the reception. The meals were served cafeteria style with enough variety to satisfy anybody. I probably gained three or four pounds over the week end. The CTMN folks usually gathered together at the meals to discuss what we had done and what we

Continued on next page...

## A Weekend in the Hill Country...continued

should do. Lynn had to attend some organizational related meetings; the rest of us followed our "Natural" instincts...

Saturday was filled with 'AT' and more 'AT' with a couple of off campus bus trips available. The day ended with a social sponsored by the Texas Master Naturalists and a slide show of different chapter's activities.

Sunday opened with the 'Keynote' session and presentations of awards and other recognitions. I even got recognized for having certified within the year of joining. There were a lot of people that received more significant recognition for the thousands of hours that it takes to make this organization work.

After the meeting there was a couple of hours to kill before the noon and final meal so what to do, what to do? Why not do a little more 'AT'... There was and we did...

The time to leave came too soon and I checked to see if we could have stayed an extra day. We could have and we might take advantage of that the next time the event is held at the MO Ranch. The only fault I had with the trip was just not enough time to do all that I wanted to.

### So who are these people???

There were numerous opportunities to visit with members from other chapters during breaks, the social sessions, and meetings. There were also exhibits that highlighted chapter activities.

My most interesting encounter came between classes when I had to return to our room for some reason. As I passed under an oak mott, there were these two wild women running around with nets chasing Monarch Butterflies. The Monarchs were in the middle of their

fall migration and had clustered in the oak trees. They spotted my camera and asked me to photograph the cluster.

The 'wild' women were Gracie Waggner and Cathy Downs, both very active in the 'Save the Monarch'

The 'Wild Ones': Joe, Gracie and Cathy at the Texas Pollinator PowWow Feb 28, 2015

programs and they were tagging the butterflies.

I have since established email connections with them and Cathy has agreed to give a program to the CTMN when and if we have the milkweed seed collection activity (another story). They had a display at the Texas Pollinator PowWow in February and we had a reunion of 'wild' people.

Sarah and I have long protected milkweed and Monarchs on our place and with the current critical situation; we are getting more active in Monarch/pollinator related programs. The connection with Gracie and Cathy is another reason *Why I am a Master Naturalist.*

# CENTRAL TEXAS MASTER NATURALISTS

*Please join us as we honor our 2015 trainees with an  
Ice Cream Social*

**Tuesday, June 9, 2015  
6:00 - 8:00pm**

**Temple Public Library  
100 W. Adams Street  
McLane Room—3rd Floor**

***Family Members and Friends of Trainees are Welcome***

**Program: “Living with Central Texas Herps”  
By Will and Kassie Franklin and their animals**

We will hold an Ice Cream Social on Tuesday, June 9<sup>th</sup> to honor the 2015 Master Naturalist Trainees including recognition of those who will graduate having completed all 20 training classes over the last several weeks.

Trainees are encouraged to bring their families - note the change in location to the Temple Public Library. A program by Franklin HERPS on reptiles and amphibians of Central Texas will close the evening with live animals. This will count as Advanced Training for Master Naturalists, but is geared for the guests attending as well.
