

Construction & Use of Keys

- Keys are just that... a key that opens doors to the identities of plants
- Also can be considered maps leading to a destination: the identity of an unknown plant

Construction & Use of Keys

- Series of paired, mutually exclusive statements
- Divides a set of objects or classes
- Progressively smaller subsets
- Each subset has one and only one object or kind of object

Dichotomous Key

- Bracketed or bracket key
- Indented key
- Presents two choices = couplets
- Lead to another couplet
- And so on
- Reach the name of the plant

Rules for the Construction of Keys

- Begin each statement with a capital letter and end with a period
- Begin each statement with the subject
- Noun (what you want the reader look at)
- Avoid the use of the word “not”
- Use “absent: instead of “not pres
- Use “without” instead of “not pubescent”

Rules for the Construction of Keys

- Use measurements instead of “large,” “small,” “short”
- The verb, which is always a form of “to be,” is omitted
- The predicate consists of one or more adjectives or other modifiers that describe the subject
- Predicates describe alternate, non-overlapping conditions of the subject

Example of a Bracketed Key

- 1. Shaft of fastener with spiral grooves.2
- 1. Shaft of fastener smooth.3
- 2. (1). Tip of shaft pointed.screw
- 2. Tip of shaft blunt.bolt
- 3(1). Head cylindrical, nearly as tall as wide.
...finishing nail
- 3. Head flat, much wider than thick.4
- 4.(3). Shaft 1 inch or more long.nail
- 4. Shaft less than ½ inch long.tack

Guidelines for Using Keys

- Always read both parts of the couplet
- Make sure you understand the meaning of the terms used. **DO NOT GUESS!!!**
- Where minute objects are concerned, use a lens of sufficient magnifying power to clearly see the feature you need to see.
- **DO NOT** base your conclusion on a single observation of a plant part.

Guidelines for Using Keys

- If the choice of division is not clear, try both divisions
 - You will reach two different answers
 - Read the descriptions of each to make a choice
- After having arrived at an answer in a key, **DO NOT** accept it as the one true answer
 - Check the plant's description to see if it matches your plant

HAVE FUN!
