

The Naturalist

Volume 11 Issue 10

October 1, 2026

The mission of the Master Naturalist Program is "to develop a corps of well-informed volunteers who provide education, outreach, and service dedicated to the beneficial management of natural resources and natural areas within their communities for the state of Texas."

Who Did What in September

The Naturalist

President's Corner

by Mike Wenzel

As fall begins our outreach activities get real busy. Be on the lookout for sign up sent by Holly. If you have never done an outreach event before and are a little uncertain, I invite you to just come out and see what they are all about. I believe it will not be long before you are front and center engaging people, adults and kids alike.

The Texas Master Naturalist annual meeting in Waco is fast approaching. I will be to represent our Chapter. While there I plan to go out and see the Waco Mammoth National Monument. One of my grandsons is big time into Dinosaurs and I think he would love to go there one day. I have found in the past it makes for a much better experience if I go "scout" out places and see what there is to see and then take the grandkids there. This gives me the chance to see and read everything and then on another day take the grandkids and allow them to go through at whatever pace they wish. Sometimes doing outreach works in the same way. You will have folks that want the 30 second sound bite and then others that want the whole story and will ask questions. Both are great because at the very least you are getting a chance to introduce them to what the outside has to offer.

Till next month I invite everyone to go out to an outreach event. I am certain you will enjoy meeting and engaging those present.

September Training

by: Mara Doemland

Month two of the initial training for all new naturalist was a huge success. We learned about plant identification and high profile barrier islands at Padre Island National Seashore. Then to Oso Bay Wetlands and Nature Preserve where shell middens and native people were covered.

Texas Master Naturalist – October Chapter Meeting

Tuesday, October 20, 6:30 pm

South Texas Botanical Garden – Education Room

Sarah Affeldt & Phil Lamb – Texas Parks & Wildlife Department, Texas Parks & Wildlife Foundation

The Promise of Powderhorn

Sarah Affeldt, Park Superintendent for Powderhorn State Park, and Phil Lamb, Director of Philanthropy for Texas Parks and Wildlife Foundation, will join us and share the story of Texas' largest-ever conservation investment: the acquisition of Powderhorn Ranch.

Phil will cover the Foundation's efforts to secure the property, initial restoration efforts and transferring it to Texas Parks and Wildlife Department to become a state park and wildlife management area. Sarah will update us on the happenings at the WMA, the state park planning and all we can look forward to when the new park comes online. Don't miss this presentation on the incredible conservation win that led to Powderhorn State Park and Powderhorn WMA.

Sarah Affeldt has served as Superintendent of Powderhorn State Park since 2021, overseeing daily operations, guiding natural resource projects, planning future development, and coordinating the many moving parts of a uniquely biodiverse up-and-coming State Park. This role is her dream job—one she envisioned from her first visit, when she was immediately captivated by the property and its resources.

Sarah began her Texas State Parks career in 2018, working at Goose Island and Choke Canyon State Parks. Her work along the lower Texas coast spans roles with the U.S. Fish & Wildlife Service, TPWD Coastal Fisheries, and a nonprofit aquarium. Originally from Illinois, she holds an undergraduate degree from the University of Arizona and a graduate degree in Biology from UT Brownsville.

Sarah lives in Rockport with her husband and two young sons. An avid outdoorswoman, she is especially passionate about introducing young women to the outdoors. She enjoys running, photography, hunting, and fishing with family and friends, though these days she's happiest on the back porch with her kids.

Phil Lamb joined Texas Parks and Wildlife Foundation in 2021 and serves as the Foundation's Director of Philanthropy and Board Engagement. His primary responsibility is to work with individuals, foundations, and corporate partners on their philanthropic investments in the Foundation's work to conserve Texas' wild things and wild places.

Phil also leads capital projects, including the recently completed renovations of the Texas Freshwater Fisheries Center in Athens and the ongoing renovations of Sea Center Texas in Lake Jackson. Additionally, Phil oversees TPWF's Gear Up for Game Wardens program, which provides specialty equipment for Texas Game Wardens, and is involved in several conservation initiatives ranging from Bighorn Sheep to oysters to land acquisitions. Phil also serves as a volunteer for Texas Parks & Wildlife Department's Upland Game Bird Advisory Committee. Prior to joining the Foundation, Phil was Director of Development for the Rolling Plains Quail Research Foundation, where he led a rebranding of the organization's communications assets, recruited new board members, and raised more than \$8 million for research projects and capital improvements. Before entering the nonprofit space, Phil was a litigator and general counsel in Dallas for 15 years. Outside of his professional day-to-day life, you can find Phil somewhere outdoors or at least plotting his next outdoor adventure. He lives in Dallas with his wife and three teenage sons, all of whom love life outside as much as Phil.

In Case You Missed It – September Chapter Meeting

Michael Wetz, Harte Research Institute at Texas A&M University-Corpus Christi

Water Quality Challenges on the Texas Coast

Water quality is an essential component of coastal ecosystem health. Degraded water quality poses risks to human and wildlife health, and it is difficult to support economically and ecologically valuable habitat and fisheries with degraded water quality. Coastal water quality in Texas is under pressure from increasing human populations in coastal watersheds, aging sewage treatment infrastructure, and changing ocean conditions. This talk will synthesize results from several water quality studies in the region to answer the question, "How has water quality changed on the Texas coast?". Vignettes will be presented covering indicators of water quality health including fecal bacteria, *Vibrio* ("flesh eating bacteria"), and nutrient pollution.

The Naturalist

Outreach Experience

By Haley Racioppo

I am honored to have participated in my first event with the Master Naturalists at HawkWatch's Celebration of Flight Festival! I was hesitant to volunteer at first, as my knowledge of local birds is still relatively limited. However, the support provided by experienced Master Naturalists made the introduction feel natural and gave me the confidence to jump in to learn as I went. We had replica bird skulls and an egg for the public to identify, and many people started off doubtful of their identification skills. It was fun to see their excitement grow throughout the activity, whether they correctly identified the bird or simply learned something new. The experience reminded me how much I enjoy learning alongside others and sharing that enthusiasm with the public. I am excited to continue developing my skills as a Master Naturalist and participating in future volunteer outreach events.

Monk Parakeets in my Yard

By: Randy Bissell

One of the more entertaining parts of living in our “birdiest” Corpus Christi is never quite knowing what may show up in the yard. This afternoon it was a flock of about two dozen Monk Parakeets (*Myiopsitta monachus*)—bright green, noisy, social, and impossible to overlook.

Monk Parakeets, also called Quaker Parrots, are native to South America and became established in several U.S. cities after escaped or released pets founded breeding populations. Corpus Christi has had them for decades, and today they seem well established in several parts of town.

What makes these parrots especially interesting is their nesting behavior. Unlike most parrots, which use cavities, Monk Parakeets build large communal stick nests. A single nest structure may contain several chambers and house multiple pairs, creating what amounts to a parakeet apartment complex.

At my house on Circle Drive, the Seaside Cemetery and surrounding neighborhoods seem to be a local center of their raucous activity. Seeing roughly thirty birds together in my yard suggests that the nearby colony is large.

Today, I'm content to watch the green-and-gray crowd descend on my yard—and listen to them announce their happy place hidden in boughs of the big oaks. Then, they swoop to Dawn's feeders in pairs and threesomes, fussing the whole time.

The Naturalist

Wildlife Watch: Captured by Camera

By Mike Wenzel

Welcome to this month's edition of Wildlife Watch, where I share some of the fascinating birds and wildlife captured by my camera and trail cameras—both locally and beyond. This month I want to feature some photos I took on a recent birding trip. First up is a real nice looking Black Neck Stilt. This was taken at Tule Lake birding platform. The water was real low this day so there was plenty of birds around to see. The next up is a Reddish Egret at Indian Point. They are quite amusing to watch as they prance around looking for their next meal. The next bird is a Tri Colored Heron that was kind enough to pose for a great picture. They are very beautiful birds and I love it when I get a chance to see them up close. The last bird is a Forster's Tern that I was lucky enough to get in flight. Blurred in the background is the Nueces Bay Causeway. All these birds were photographed on the same day. It reminds me that you never know what you might see but one thing is certain you will not see anything unless you go.

Outreach Kits: Take Nature on the Road!

By Holly Ahern

Ready to share your love of nature with others? Our new **Outreach Kit Checkout System** makes it easier than ever to participate in community events. Packed with hands-on activities, displays, and educational materials, our outreach kits are designed to help you confidently engage children, families, and adults - whether you're a seasoned volunteer or participating for the very first time. Watch your email for upcoming outreach volunteer opportunities or contact Holly if you have a small local school event and want to help inspire the next generation of naturalists, one conversation at a time!

Volunteer Opportunities

Visit our South Texas Chapter homepage to view all of our October opportunities.

Mustang Island State Park

You can volunteer by:
Having beach walks, shell & tell, bird/plant identification, sea turtle help, geology education, trash pick up, geogaching, and much more.

You can either have an informal or planned/scheduled volunteer time.

Contact:

Suzanne Smith, Operations Trainee,
Mustang Island State Park

Butterfly Bio BLITZ

Oct. 1-4, 2026

Welcome! The Kingsville Butterfly BioBlitz 2026 in conjunction with the annual Kingsville Butterfly Blitz is This is a great opportunity to help showcase the many different species of bugs, birds, reptiles, fungi, plants, and other organisms that are found here in Kleberg County. This special 4-day activity will collect information that could assist in future conservation planning and aid in preserving species like the Monarchs for many generations to come.

Step 1: To get started, Download iNaturalist the app from any play store
Step 2: Take a photo of any animal, plant, fungi and more.
Step 3: Upload the photo into the app.
Step 4: Set location;

The app can assist with the rest. You can also follow the QR code below for more on the "how to" and the Project

As an added bonus there will be a prize for the person with the most Butterflies/Moths and the one with the most overall species. So good luck and have fun! There is an amazing world out there to discover!
